# CMPE436 Presentation

— Murat Buldu —

---

---

Let's download the PDFShare.

Then click "BE SERVED" button...

Digital Ocean is used for server.

TCP Sockets are used in the project in 5005 port.

You can enter a Channel in ListToBeServed.

Then enjoy the presentation.

Also, you can be THE PRESENTER.

Click Serve button.

Then enter Presentation title and filename.

For now only “presentation.pdf” and “target1.pdf” are valid files.

# Useful to add:

- User login.
- Download to and upload from server.
- Remove closed channels.
- UI improvements...

---

---

# Thank you.
